AGRICULTURAL MARKETING ADMINISTRATION

WHEAT FUTURES STATISTICS
January 1939 - June 1941

INTRODUCTION

Detailed information on trading operations and price movements is a necessary foundation for the work of the Commodity Exchange Branch ^{1/} of the Agricultural Marketing Administration. The statistics in this bulletin are derived largely from the daily trading and position reports filed by exchange clearing members and large traders, as required under the Commodity Exchange Act. The data cover the period from January 1939 through June 1941 and are a continuation of the statistics presented in U. S. Department of Agriculture Statistical Bulletins No. 31 (1921-29), No. 41 (1930-32), No. 54 (1933-35), and No. 72 (1936-38).

Character of Statistics

Eight contract markets conducted trading in wheat futures during the period January 1939 - June 1941. Of these eight, the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade were the most important. For this reason a number of the tables are limited to these three markets. These three markets together with the Duluth Board of Trade and the Milwaukee Grain and Stock Exchange have a round-lot unit of trading of 5,000 bushels and a job-lot unit of 1,000 bushels. The Seattle Grain Exchange, the Portland Grain Exchange, and the Chicago Open Board of Trade have only a 1,000-bushel unit of trading.

All eight exchanges base their futures contracts upon the same four months--May, July, September, and December. ^{2/} For this reason tables presenting data for individual futures show only these months. Occasionally a change in the terms of a futures contract results in concurrent "old" and "new" contracts during the remaining life of the future. Where this has occurred the volume and open contract data of the two contracts have been merged; for price data the more active one, judged by size of open contracts, has been used.

^{1/} Formerly the Commodity Exchange Administration.

^{2/} Only two exceptions occurred during the period January 1939 - June 1941. There was a small amount of trading in an October future on the Duluth Board of Trade and in two March futures on the Chicago Board of Trade.

OCT 6 1942
U. S. D. A.

Volume of Trading

The first four tables present volume of trading figures. Only one side of the trades is shown since purchases and sales are equal. Table 1 is a monthly record of trading, all futures combined, for each of the eight wheat futures markets, January 1939 to June 1941. Table 2 gives comparable data by crop years from 1935-36. Table 3 classifies the monthly volume of trading by individual futures for the period January 1939 - June 1941 for the three markets--Chicago Board of Trade, Minneapolis Chamber of Commerce, and Kansas City Board of Trade. In table 4 the volume of trading on the Chicago Board of Trade is further classified as round-lot and job-lot. These figures on volume of trading were obtained from reports filed by clearing members with the Commodity Exchange Branch.

Open Contracts

Tables 5, 6, and 7 present statistics on open contracts. These tables are similar in construction to tables 1, 2, and 3 on volume of trading. Total open contracts as of the close on the last trading day of each month are shown by markets in table 5, from January 1939 to June 1941. Comparable data from 1935-36 are shown in table 6, arranged by crop years. In table 7, month-end open contracts are shown by principal futures for the three largest wheat futures markets from January 1939 to June 1941. These open contract data were tabulated from reports regularly received from clearing members of exchanges. They represent the aggregate of all customer positions (including those for the account of clearing members) open on the books of clearing members as of the close of trading each month end. For any single future, as well as for all futures combined, the aggregate of all long positions must equal the aggregate of all short positions. Hence in tables 5, 6, and 7 only one side is shown. Job-lot positions have been included with round-lot.

Contracts Settled by Delivery

Tables 8, 9, 10, and 11 present statistics showing deliveries of wheat on futures contracts. Every open contract set up between buyer and seller gives to each party the right to accept or make delivery of the actual commodity during the delivery period. Table 8 shows by futures and by markets, for the period January 1939 - June 1941, deliveries in even amounts, as a percentage of maximum open contracts, and as a percentage of contracts open at the beginning of the delivery period. Tables 9, 10, and 11 show a further breakdown of delivery data during this same period for the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade. Here total contracts settled by delivery are divided into initial deliveries (the net amounts of wheat involved in delivery) and re-deliveries. Initial deliveries are, in turn, classified by grade

showing the actual amounts in bushels. In the process of delivery, notices of delivery are served by the seller on the buyer through the clearing association. Where these notices pass through successive hands, a clearing of trades is effected. Cleared trades, involving notices passed, are shown in tables 9, 10, and 11 in a separate column. All four delivery tables include job-lot deliveries with round-lot.

Futures Prices

Price data are shown in tables 12, 13, 14, and 15. The first three of these tables give daily closing prices on the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade, by futures, for the period January 3, 1939 - June 30, 1941. Quotations shown in these tables were obtained from daily market records of the exchanges. They are closing quotations, i.e., those established during the closing seconds of each trading session. ^{3/} Where trades during the close were made at different prices a range is shown; otherwise a single figure. Where there were no transactions during the close but a bid or asked quotation was reported, this is shown marked "b" or "a." Where a future was inactive and neither prices nor bid or asked quotations were available, a nominal quotation was sometimes posted. Where this occurred the quotation has been marked "n." Additional price notations are to be found as footnotes to these tables. The figures show closing quotations for each of the four principal futures beginning with the first day on which a round-lot trade occurred and ending with the last trading day in the delivery month.

Table 15 records the days, for the period January 3, 1939 - June 30, 1941, during which wheat futures prices moved to the daily fluctuation limits established by the Chicago Board of Trade. Up to September 5, 1939, a 5-cent limit above or below the close of the preceding day was in force, except during a delivery month when an 8-cent variation in the expiring future was permitted. On the two days, September 5 and 6, 1939, the limit was 5 cents for all futures, including the expiring future. Beginning September 7, the limit was increased to 10 cents for all futures. On May 20, 1940, the Chicago Board of Trade, at the request of the Secretary of Agriculture, established minimum prices for wheat futures, at the same time continuing the 10-cent limit. These minimum prices were: May future, 79 cents; July, 79 1/2 cents; September, 78 1/4 cents; and December, 79 1/4 cents. On June 20, 1940, these minimum prices were rescinded, with the 10-cent limit continuing through June 1941.

^{3/} As a rule the official closing period involves perhaps less than one minute's time. Occasionally, however, when brokers have a fairly large volume of orders to be executed "at the close," the closing period may be longer.

Trades and Commitments of Reporting Traders

The rules and regulations of the Secretary of Agriculture, promulgated under the Commodity Exchange Act, require that whenever a trader's position in any one commodity future on any contract market reaches or exceeds a prescribed amount, he must report his entire position in that commodity to the Commodity Exchange Branch. For wheat futures this amount was 200,000 bushels throughout the period January 1939 - June 1940. In reporting his entire position, each trader must show long or short commitments by futures and by markets (including positions on foreign markets). He is required also to classify his commitments by type as hedging, spreading, speculative. The reports of these large-scale traders were received daily by the Commodity Exchange Branch during the period January 3, 1939 - June 30, 1941, and constitute the source of the figures shown in tables 16 to 20.

Table 16 gives the monthly purchases and sales of all reporting traders for each of the three principal contract markets, for the five minor contract markets combined, and for all foreign markets combined. Supplementing these purchase and sale figures are percentages showing the proportion of total trading (as shown in table 1) executed for the account of reporting traders. Table 17 shows a similar arrangement of data for commitments as of the end of each month. A further point of interest should be noted in table 17. If the long and short commitments shown in this table are subtracted from the corresponding total open contracts of table 5, the remainders obtained show the aggregate commitments long and short of the under-200,000-bushel traders. These are the positions of all small- and medium-sized traders. On balance, these positions are usually long. They are mostly speculative positions with, however, some hedging and spreading included.

Tables 18, 19, and 20 present a breakdown of reporting-trader commitments according to whether they were reported as hedging, spreading, or speculative. The figures shown are as of the close of each trading session. Commitments reported as hedging were preponderantly short throughout the period. This is characteristically true of hedge positions. Commitments reported as spreading include all round-lot spreads between futures and between markets as well as spreading between round lots and job lots on the Chicago Board of Trade. For all futures and markets combined, long spreading commitments were approximately equal to short spreading commitments. Commitments reported as speculative were predominately long during most of the period January 1939 - June 1941. An exception was during the first six months of 1941, when the speculative commitments on foreign markets were almost entirely short.

1/ In settling contracts by delivery, the seller is allowed a tolerance up to one percent on warehouse delivery and a larger allowance on carlot track delivery. For this reason the total of initial deliveries by grades usually varies somewhat from the total of contracts settled by initial delivery.

Key to price notations:

- a - asked price
- a* - asked price on days no round-lot trades occurred
- b - bid price
- b* - bid price on days no round-lot trades occurred
- n - nominal price
- N.Q. - no closing price quoted by exchange

Key to price notations:

- a - asked price
a* - asked price on days no round-lot trades occurred
b - bid price
b* - bid price on days no round-lot trades occurred
= - split quotation

Agricultural Marketing Administration

WHEAT FUTURES STATISTICS
JULY 1941 - JUNE 1942

INTRODUCTION

Statistics on wheat futures are published periodically by the Commodity Exchange Branch of the Agricultural Marketing Administration. This bulletin covers the crop year 1941-42 (July 1941-June 1942). The statistics are a continuation of those presented in U. S. Department of Agriculture Statistical Bulletins No. 31 (1921-29), No. 41 (1930-32), No. 54 (1933-35), No. 72 (1936-38), and Wheat Futures Statistics, January 1939-June 1941. The information contained in this bulletin is derived for the most part from daily trading and position reports required under the Commodity Exchange Act of exchange clearing members and large traders.

Nature of Statistics

During the crop year 1941-42, eight contract markets conducted trading in wheat futures. These exchanges and the unit of trading employed are as follows:

<u>Exchange</u>	<u>Unit of Trading</u>	
	<u>Round-lot</u>	<u>Job-lot</u>
Chicago Board of Trade	5,000 bushels	1,000 bushels
Minneapolis Chamber of Commerce	5,000 "	1,000 "
Kansas City Board of Trade	5,000 "	1,000 "
Duluth Board of Trade	5,000 "	1,000 "
Milwaukee Grain & Stock Exchange	5,000 "	1,000 "
Chicago Open Board of Trade	1,000 "	---
Seattle Grain Exchange	1,000 "	---
Portland Grain Exchange	1,000 "	---

JAN 20 1943

July, September, December, and May are the active futures months upon which all eight exchanges base their futures contracts. Occasionally trading occurs in other (inactive) months, principally October and March. In instances where a change in the terms of a futures contract results in simultaneous trading in "old" and "new" contracts, data on both types of contracts have been merged. Prices are the exception, as only the more active of the two types of contracts, judged by the size of open contracts, has been used. Data on round and job-lot contracts have been combined in all tables.

Wheat futures statistics fall into five principal classes, namely, volume of trading, open contracts, contracts settled by delivery, futures prices, and trades and commitments of reporting traders. The data in this bulletin appear in this order. Many of the tables present data for all markets but in some instances statistics cover only the three principal exchanges, the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade.

Volume of Trading

Volume of trading figures are derived from daily reports required of all clearing members on each contract market giving purchases and sales of futures. The aggregate of purchases in one trading session equals the aggregate of sales. Volume of trading is the total of either purchases or sales (not purchases and sales combined). Table 1 is a monthly compilation of volume of trading, all futures combined, on each contract market for the crop year 1941-42. Comparable data for crop years since 1936-37 are given in table 2. Monthly volume of trading for the crop year 1941-42 for individual futures on the Chicago Board of Trade, Minneapolis Chamber of Commerce, and Kansas City Board of Trade is shown in table 3.

Open Contracts

Open contracts are also obtained from daily reports required of exchange clearing members. They represent the aggregate of all positions of customers and of "house accounts" for each contract market open on the books of the clearing members at close of trading each day. As the aggregate of all long positions must equal the aggregate of the short, only one side

is shown. The statistics of open contracts in tables 4, 5, and 6 are comparable in scope with tables 1, 2, and 3 on volume of trading. Open contracts as of the last trading day of each month during the crop year 1941-42 are given by markets in table 4. Comparable data for crop years since 1936-37 are shown in table 5. Table 6 classifies the month-end open contracts by principal futures for the three largest markets.

Contracts Settled by Delivery

Contracts settled by delivery are contracts fulfilled by the delivery of the physical commodity, usually by means of warehouse receipts. The delivery data presented here are obtained from reports of clearing members and from delivery notices filed with the Commodity Exchange Branch during the delivery period of each future. Table 7 shows for each market the futures contracts settled by delivery, also deliveries as percentage of maximum open contracts during the life of each future and as percentage of contracts open at beginning of first notice day.

A further breakdown of delivery data on the three leading exchanges is shown in tables 8, 9, and 10. In these tables, total contracts settled by delivery are divided into two classes: (1) initial deliveries classified by grade, and (2) redeliveries. Initial deliveries are the net quantities of actual wheat involved in settlement of open contracts. The same grain may be redelivered to settle additional contracts. Notices passed also appear in tables 8, 9, and 10. A notice is said to be "passed" when a long trader, who has received a notice of delivery from the clearing house, sells his long contract instead of accepting delivery. In selling, he "passes" the notice back to the clearing house.

Futures Prices

Futures prices are obtained from the records of the exchanges. Tables 10, 12, and 13 give daily closing prices by futures during the crop year 1941-42 on the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade. In most instances closing quotations are those established in the closing seconds of each trading session. Where more than one price was reported during the closing period,

a range is shown. If no transactions occurred during the close, but a bid or asked quotation was reported, this is shown as "b" or "a". A key to the types of price notations appears at the end of each table. Prices are shown for each of the four principal futures beginning with the first day on which a round-lot trade occurred and ending with the last scheduled trading day of each future.

Trades and Commitments of Reporting Traders

Whenever a trader's position in any one wheat future on any contract market equals or exceeds 200,000 bushels, he is required to report to the Commodity Exchange Branch on a daily basis. He must report his trades and his long and short commitments in all futures on all markets (including foreign markets). It is also required that the trader classify his commitments as to type, i.e., whether hedging, spreading or speculative. The reports of these large-scale traders are the source of information contained in tables 14 to 18.

Table 14 shows for the crop year 1941-42 monthly purchases and sales of all reporting traders on each of the three leading wheat exchanges, and also shows combined figures on the five smaller exchanges and on foreign markets. Supplementing these purchase and sale figures are percentages showing their proportion of total trading (as given in table 1). A similar arrangement of data for month-end commitments of reporting traders is given in table 15. If the long and short commitments of reporting traders (table 15) are subtracted from the corresponding total open contracts in table 4, the remainders obtained are the aggregate long and short commitments of nonreporting traders (traders whose individual positions are under 200,000 bushels). These derived positions are usually net long. They are mostly speculative positions of small and medium-sized traders with, however, some hedging and spreading included.

A more detailed breakdown of reporting-trader commitments is found in tables 16, 17, and 18. Here the figures are classified according to whether they were reported as hedging, spreading, or speculative, and are shown on a daily basis for the crop year 1941-42. Commitments reported as hedging were predominantly short, which is characteristic of most hedging positions. These reported short hedging commitments also constituted the major

- 5 -

portion of total short wheat contracts. For all futures and markets combined, long commitments reported as spreading (including spreading between round and job-lots) were approximately equal to short spreading commitments. Reported speculative commitments were predominantly long during the crop year 1941-42.

WHEAT FUTURES STATISTICS
JULY 1942 - JUNE 1946

INTRODUCTION

This compilation of data on wheat futures covers the four crop years, 1942-43 through 1945-46. The data are a continuation of those presented in a previous bulletin, Wheat Futures Statistics, July 1941-June 1942. The information is derived primarily from daily trading and position reports required under the Commodity Exchange Act of exchange clearing members and large traders.

Nature of Statistics

During the four-year period, there was trading in wheat futures in eight contract markets. These exchanges and the unit of trading employed are as follows:

<u>Exchange</u>	<u>Unit of Trading</u>	
	<u>Round-lot</u>	<u>Job-lot</u>
Chicago Board of Trade	5,000 bushels	1,000 bushels
Minneapolis Chamber of Commerce	5,000 "	1,000 "
Kansas City Board of Trade	5,000 "	1,000 "
Duluth Board of Trade	5,000 "	1,000 "
Milwaukee Grain & Stock Exchange	5,000 "	1,000 "
Chicago Open Board of Trade	1,000 "	---
Seattle Grain Exchange	1,000 "	---
Portland Grain Exchange	1,000 "	---

July, September, December, and May are the active futures months upon which all eight exchanges base their futures contracts. Occasionally trading occurs in other (inactive) months, namely August, November, and March. Data on round and job-lot contracts have been combined in all tables.

Wheat futures statistics fall into five principal classes, namely, volume of trading, open contracts, contracts settled by delivery, futures prices, and trades and commitments of reporting traders. The data in this bulletin appear in this order. Many of the tables present data for all markets but in some instances statistics cover only the three principal exchanges, the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade.

Volume of Trading

Volume of trading figures are derived from daily reports required of all clearing members on each contract market giving purchases and sales of futures. The aggregate of purchases in one trading session equals the aggregate of sales. Volume of trading is the total of either purchases or sales (not purchases and sales combined). Table 1 is a monthly compilation of volume of trading, all futures combined, on each contract market for the four crop years, 1945 through 1946. Comparable data for crop years since 1941 are given in table 2 for the principal markets. Monthly volume of trading for the crop years 1943-46 for individual futures on the Chicago Board of Trade, Minneapolis Chamber of Commerce, and Kansas City Board of Trade is shown in table 3.

Open Contracts

Open contracts are also obtained from daily reports required of exchange clearing members. They represent the aggregate of all positions of customers and of "house accounts" for each contract market open on the books of the clearing members at close of trading each day. As the aggregate of all long positions must equal the aggregate of the short, only one side is shown. The statistics of open contracts in tables 4, 5, and 6 are comparable in scope with tables 1, 2, and 3 on volume of trading. Open contracts as of the last trading day of each month during the crop years 1943-46 are given by markets in table 4. Comparable data for crop years since 1941 are shown for the principal markets in table 5. Table 6 classifies the month-end open contracts by principal futures for the three largest markets.

Contracts Settled by Delivery

Contracts settled by delivery are contracts fulfilled by the delivery of the physical commodity, usually by means of warehouse receipts. The delivery data presented here are obtained from reports of clearing members and from delivery notices filed with the Commodity Exchange Authority during the delivery period of each future. Table 7 shows for each market the futures contracts settled by delivery, also deliveries as percentage of maximum open contracts during the life of each future and as percentage of contracts open at beginning of first notice day.

A further breakdown of delivery data on the three leading exchanges is shown in tables 8, 9, and 10. In these tables, total contracts settled by delivery are divided into two classes: (1) initial deliveries classified by grade, and (2) redeliveries. Initial deliveries are the net quantities of actual wheat involved in settlement of open contracts. The same receipt may be redelivered to settle additional contracts. Notices passed also appear in tables 8, 9, and 10. A notice is said to be "passed" when a long trader, who has received a notice of delivery from the clearing house, sells his long contract instead of accepting delivery. In selling, he "passes" the notice back to the clearing house.

Futures Prices

Futures prices are obtained from the records of the exchanges. Tables 11, 12, and 13 give daily closing prices by futures during the crop years 1943-46 on the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Kansas City Board of Trade. In most instances closing quotations are those established in the closing seconds of each trading session. Where more than one price was reported during the closing period, a range is shown. If no transactions occurred during the close, but a bid or asked quotation was reported, this is shown as "b" or "a". A key to the types of price notations appears on each table. Prices are shown for each of the four principal futures beginning with the first day on which a round-lot trade occurred and ending with the last scheduled trading day of each future.

Trades and Commitments of Reporting Traders

Whenever a trader's position in any one wheat future on any contract market equals or exceeds 200,000 bushels, he is required to report to the Commodity Exchange Authority on a daily basis. He must report his trades and his long and short commitments in all futures on all markets (including foreign markets). It is also required that the trader classify his commitments as to type, i.e., whether hedging, spreading, or speculative. The reports of these large-scale traders are the source of information contained in tables 14 to 18.

Table 14 shows for the crop years 1943-46 monthly purchases and sales of all reporting traders on each of the three leading wheat exchanges, and also shows combined figures on the five smaller exchanges and on foreign markets. Supplementing these purchase and sale figures are percentages showing their proportion of total trading (as given in table 1). A similar arrangement of data for month-end commitments of reporting traders is given in table 15. If the long and short commitments of reporting traders on contract markets (table 15) are subtracted from the corresponding total open contracts in table 4, the remainders obtained are the aggregate long and short commitments of nonreporting traders (traders whose individual positions are under 200,000 bushels). These derived positions are usually net long. They are mostly speculative positions of small- and medium-sized traders with, however, some hedging and spreading included.

A more detailed breakdown of reporting-trader commitments is found in tables 16, 17, and 18. Here the figures are classified according to whether they were reported as hedging, spreading, or speculative, and are shown on a daily basis for the crop years 1943-46. Commitments reported as hedging were predominantly short, which is characteristic of most hedging positions. These reported short hedging commitments also constituted the major portion of total short wheat contracts. For all futures and markets combined, long commitments reported as spreading (including spreading between round and job-lots) were approximately equal to short spreading commitments. Reported speculative commitments were predominantly long during the crop years 1943-46.

1/ For monthly totals, all futures combined, see Table 1. Because of occasional trading in odd-month futures, totals of the futures shown in Table 3 will not in every case equal the totals shown for all futures in Table 1.

2/ Includes 27,000 bushels in the 1944 July future, since trading began on July 24, 1943 in this future.

3/ Includes 1,524,000 bushels in the 1945 May future, since trading began on May 23, 1944 in this future.

4/ Includes 40,000 bushels in the 1945 September future, since trading began on September 28, 1944 in this future.

5/ Includes 1,039,000 bushels in the 1946 May future, since trading began on May 24, 1945 in this future.

6/ Includes 20,000 bushels in the 1946 May future, since trading began on May 28, 1945 in this future.

7/ Includes 832,000 bushels in the 1946 July future, since trading began on July 24, 1945 in this future.

8/ Includes 742,000 bushels in the 1946 September future, since trading began on September 22, 1945 in this future.

9/ Includes 418,000 bushels in the 1946 December future, since trading began on December 21, 1945 in this future.

10/ Trading was suspended March 26, 1946, in the 1946 May future; figure includes 46,000 bushels in the 1947 May futures, since trading began on March 23, 1946 in this future.

11/ Trading was suspended March 13, 1946, in the 1946 May future.

12/ Trading was suspended March 28, 1946, in the 1946 May future.

13/ Trading was suspended on the Chicago Board of Trade and Kansas City Board of Trade, June 13, 1946. Trading was limited to liquidation only in the July, September, and December deliveries on the Minneapolis Chamber of Commerce, June 13, 1946.

WHEAT FUTURES

Table 16.--Hedging commitments of reporting traders, 1/ on specified contract markets, on all contract markets, and on foreign markets, by days, July 1942 to June 1946--Continued

1/ Persons subject to the 200,000-bushel reporting requirement.

2/ Less than 1,000 bushels.

3/ Trading suspended June 13, 1946, on the Chicago Board of Trade, Chicago Open Board of Trade, Kansas City Board of Trade, and Milwaukee Grain and Stock Exchange, and limited to liquidation only in the July, September, and December deliveries on the Minneapolis Chamber of Commerce.

4/ Trading suspended June 15, 1946, on the Duluth Board of Trade.

5/ 10-day average.
